

## **Advanced Computer Engineering Services, Inc. (ACES) expands operations with a new office in Greensboro, North Carolina**

- *With another office location, the company's expansion aims to enable more customers to benefit from its proven website design, Internet marketing, graphic design, copywriting and custom software development expertise.*

**Greensboro, North Carolina, October 25th, 2006:** Advanced Computer Engineering Services, Inc. (ACES), an established provider of comprehensive website and software services, has commenced operations from its latest office in Greensboro, North Carolina.

The company's third office in the country adds to its current operations in San Diego, California and Chicago, Illinois. ACES will extend its full line of services including website design, Internet marketing, graphic design, copywriting and custom software development to clients in the region.

"We are very excited to set up a base in Greensboro and offer our services to clients here. While the nature of our business and operating model allow us to serve clients remotely, as we currently do with customers from all over the US, our clients will certainly appreciate and benefit from our physical presence in Greensboro," says Marc Hansche, President & CEO of ACES. "Towards that end, we will expand our team at this office over the next several months."

Having started operations in 1991 in San Diego, California, ACES has been providing custom software applications for both large and small businesses, including customers in the broadcast and cable industry. While constantly striving to utilize the benefits of the latest technology, ACES adopts a highly pragmatic, bottom line-focused approach that weighs in the costs and benefits of using a particular technology or solution.

"Our focus on the most appropriate solution to meet each client's unique needs dictates the choice of solution, not what lies within our comfort zone; our team has consistently pushed the envelope in its bid to achieve excellence and total customer satisfaction," states Hansche. "I believe that is one of the strongest differentiators that set us apart from numerous other players in the market."

Describing the extensive website design and Internet marketing work being done by ACES as a natural progression for the company, Hansche adds, "Having provided Internet and Intranet technologies for the last several years, we find it extremely rewarding to help businesses to grow using the Web. We have also built proprietary software for Internet marketing research that we use to plan and execute a well-rounded approach to help our clients get the most from their website marketing campaigns. Businesses in North Carolina that decide to use our various website services can expect the same level of excellence and commitment that have helped us grow over the past 15 years."

## **About ACES**
